Carucco™ range

Cabrio™ Convertible Counter

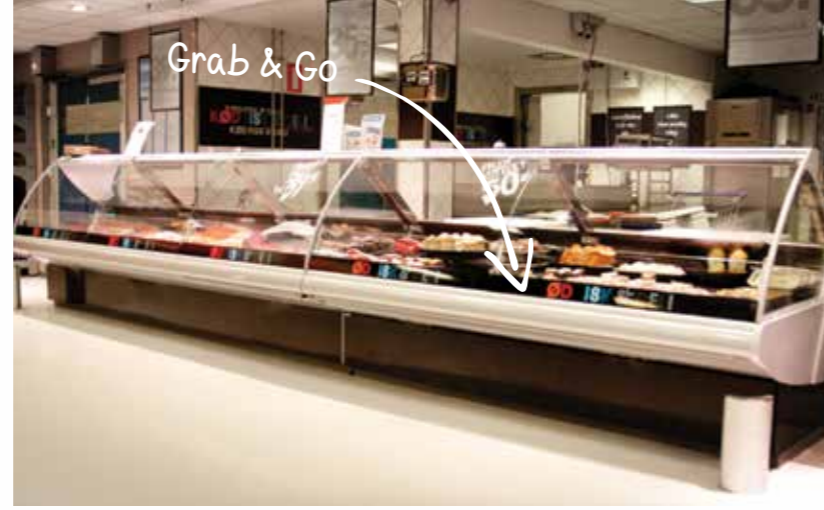

Flexible merchandise
for every market situation

Attractive, modern appearance

Multi-functional design

Easy transformation from serve-over to self-service

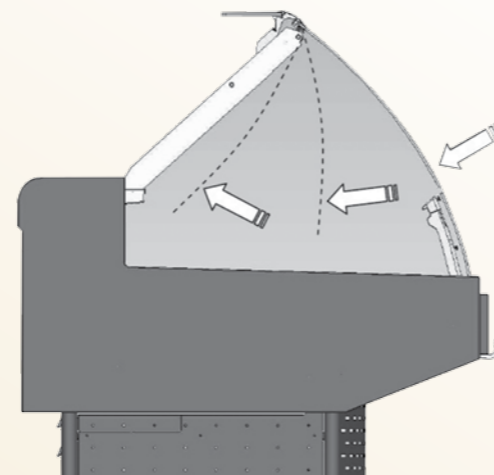

In today's stores, meeting the demand for flexibility, uniqueness and variability is essential. All of these benefits are available in the Cabrio™, a convertible counter that allows for enhanced store efficiency and tremendous adaptability.

Smart solution

Easy adjustment from self-service to serve-over by simply pushing the front glass.
No specialized technicians required.

Benefits at a glance

- Flexibility to meet a variety of store applications
- Easily convertible from self-service to serve-over
- Plug-in version for easy relocation
- Enhanced merchandising with horizontal or inclined display
- Simplified maintenance for everyday use
- Ergonomic design for staff comfort and accessibility

Cabrio, the smart solution

Multi-functionality

- The built-in multi-functionality of the Cabrio counter offers maximal use of the given floor space.
- The demands of serve-over, self-service and promotional placement in a shop can be satisfied with the purchase of only one counter.

Ergonomics

- The shop operator can carry out operations efficiently with a convertible counter.
- A new soft tummy bumper profile is developed as a multi-purpose channel for electrical cables supplying power to the scales and other electric equipment.
- Trenchers, paper holders and other accessories are moveable and functional parts of the counter.

Design

- The aesthetic design of the Cabrio plays an essential role in the functionality and attractive product presentation combined in one counter.
- An aesthetically-pleasing design is inherently impressive, however, the Cabrio also puts the product to the fore. Three different configurations provide retailers with extended design flexibility.
- Stainless steel materials deliver high quality and an elegant touch.

Energy efficiency

- The use of high-performance fans and fan speed control saves energy, reduces operating costs and respects the environment.
- Developments include a new control unit that drives the performance characteristics of the overall unit to ensure efficient operation.

*CB aesthetics (bumper as optional feature)

*E5 aesthetics (metal inlay available feature for side wall)

*I6 aesthetics

Polyethylene cutting board

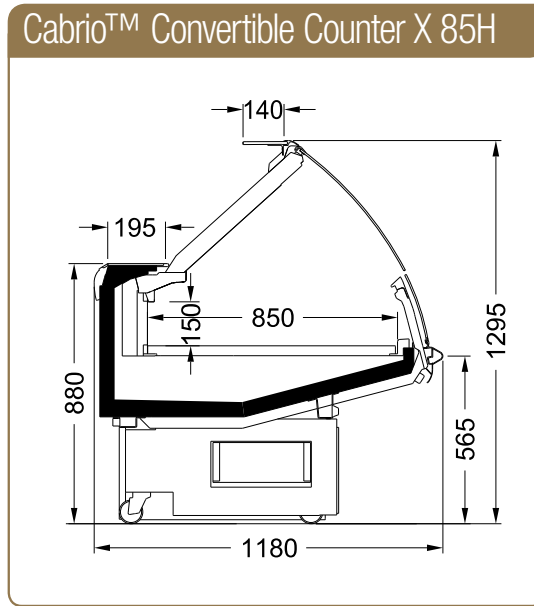

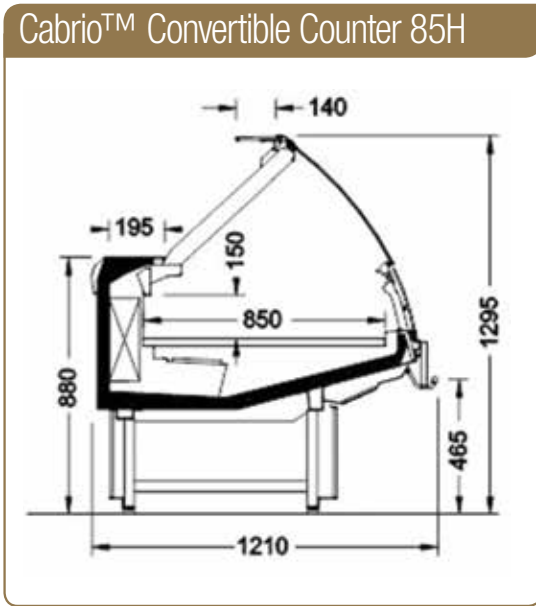

Paper tray

Knife holder

*Aesthetics: different side wall and front side versions. E5 design allows harmonious integration into existing store layout with E5 cabinets.
