

Danaos™

Stylish design
for high visibility

- Attractive and modern flat design
- Secondary product placement
- Lift-up and tilt-down front glass
- Wide range of options and customisation

Danaos never goes out of style

The classic solution meets the customer's expectations

Design & look

Good taste evolves. Carrier Commercial Refrigeration has interpreted this evolution through the design of new and simple lines that can easily become integrated into the architecture of modern shops.

Visibility

The merchandise must be easily visible from every vantage point. This means reducing to a minimum all cabinet components that may conceal the fresh merchandise and increasing its visibility to the maximum.

Transparency

Transparency improves trust. Transparency means using solutions and materials that fully display fresh products.

The difference is visible

Danaos means elegant design and atmosphere wherever it is installed

Elegant, attractive lines for a display that captures the customer's attention. The merchandise is clearly visible from all sides and the higher display shelf is closer to the customers for a better view.

Quality and craftsmanship

Careful choice of materials, highest technical standards and energy savings

Careful choice of material

A refrigeration cabinet operates for many years. Therefore, materials in Carrier Carucco counters have been carefully selected to ensure operational longevity and temperature reliability during the entirety of the cabinet's lifespan.

High performance without energy waste

Delivering high performance means long hours in the lab, carefully studying the details that improve air flow, while designing and re-

designing each component. The result is a product that does not waste energy in the shop, but uses it to refrigerate the product.

Energy consumption

The energy cost for cabinet operation during the whole life cycle can exceed the purchasing cost of the cabinet itself. Reducing energy consumption means reducing environmental impact, as well as greatly reducing management costs.

Product features

- Fan assisted air circulation.
- 2 display decks (750 mm and 850 mm)
- 2 base heights (600 mm and 540 mm)

Fitted with

- Evaporator R404A, protected by cataphoresis
- Energy saving fans
- Solar digital thermometer
- Air discharge
- Terminal block for electrical connections

Options

- Product dividers
- Pricing rail
- Cutting board, knife sheath, scale/slicer platform
- Cabinet with pedestals
- Electric defrost heater
- E-pack for other-make control

Tailor-made solutions according to your needs

An attractive and diversified fresh food offering is crucial to awaken the customer's senses. This requires not only a broad range of technical solutions, but also a seamless design and appearance.

Customisation

Various fresh products require a range of accessories with many customised solutions. A horizontal display may be necessary, or one that is sometimes slightly inclined or levels through a "step" display. A more organized display can be obtained by plexi-glass dividers. It may be necessary to customise some parts of the cabinet or protect the cabinet with an additional bumper rail.

Competitive features

The alliance of ergonomics, quality and energy savings make Danaos a unique response to your requirements.

Ergonomics

The less strain placed on the store's staff, the more attention they can devote to customers. The shop operator should be able to carry out operations in the most efficient way. Carrier has worked to simplify these operations. For example, in the soft tummy bumper profile, we have developed a multi-use channel for the electrical cable that supplies the scales. Trenchers, paper holders and other accessories are moveable and functional parts of the counter.

Quality

Stainless steel raw materials and elegant design are distinctive features of Caruccio counters. Aesthetically pleasing design is inherently impressive but, at the same time, puts the product to the fore. The cabinet surfaces that require cleaning are easy to reach in order not only to guarantee hygiene, but also present a sanitary look.

Material selection also plays an important role. In continuous operation the individual components have to resist the severest strain, whilst meeting visual demands.

Energy savings

The motivation behind Carrier Commercial Refrigeration's new solutions is to act with a focus on economic aspects while including significant reductions in energy consumption and maintaining consistently high performance. The use of high-performance fans and fan speed control saves energy, reduces operating costs and respects the environment. Developments include a new control unit that drives the performance characteristics of the overall unit to ensure efficient operation.

Polyethylene cutting board

Paper tray

Knife holder

Hanging bar for bags

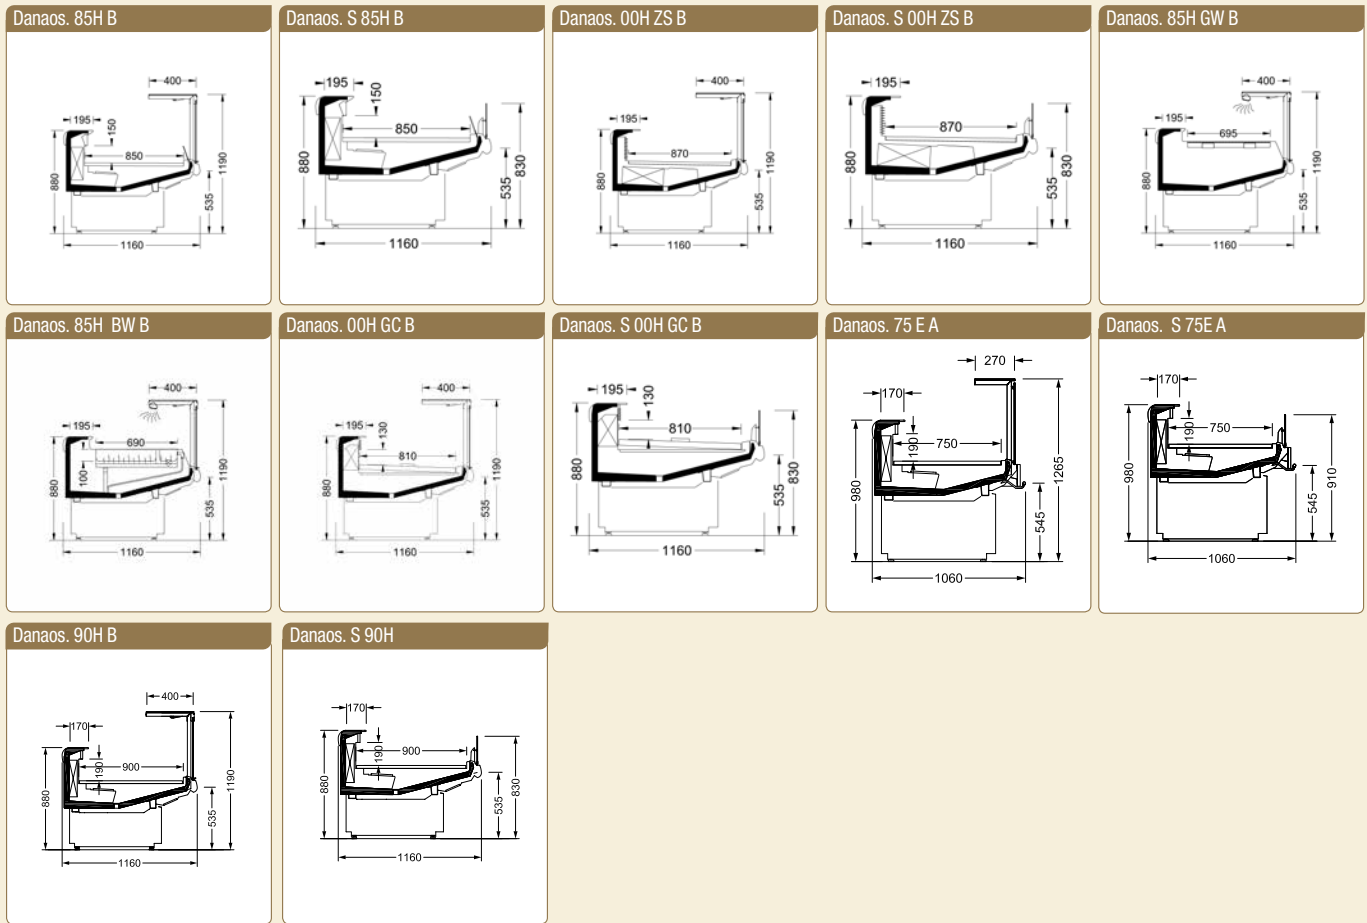

Scale / slicer platform

Soft tummy bumper profile

Product overview

* Plug in versions available with wheels for size 125, 188
 Plug in versions available with standard base (w/o wheels) for size 125, 156, 188, 250, 312, 375
